For all recent and planned innovations, potential data protection and privacy features include simplified deletion of personal data, reporting of personal data to an identified data subject, restricted access to personal data, masking of personal data, read access logging to special categories of personal data, change logging of personal data, and consent management mechanism.

Regulatory Compliance Overview

GxP is a set of regulations and quality guidelines formulated to ensure the safety of life sciences products while maintaining the quality of processes throughout every stage of manufacturing, control, storage, and distribution. The GxP standards were established by the Food and Drug Administration for a range of compliance related activities and are recognized as:

G: Good
x: Variable
P: Stands for practices

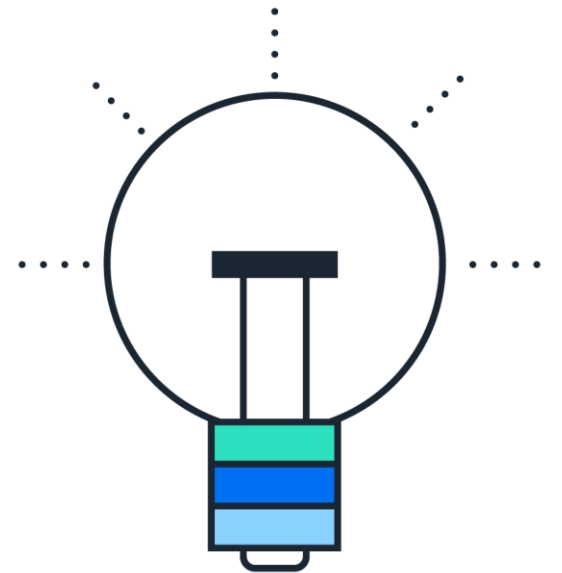

The variable “x” depends on the application of the standards. The value of x can be M for “Manufacturing”, C for “Clinical”, L for “Laboratory”, S for “Storage”, D for “Distribution”, R for “Review”, etc. The purpose of the guidelines is to ensure that the regulated organizations comply with the standard processes of various functions. GxPs are mostly similar across all the countries.

The guidelines mainly focus on the following areas:

Traceability – ensuring that the development history of the product can be reverse engineered. (Requirements to Design Elements to Code to Testing to Reporting in User Documentation)

Accountability – Identifying the contribution of every individual involved in the development process. (Training of the employees)

Data Integrity – Ensuring the reliability of data. (Data Security)

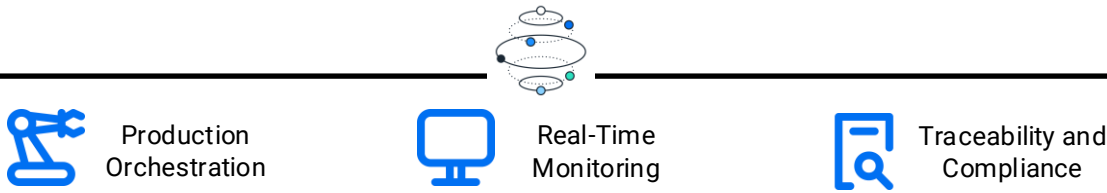

Definitions

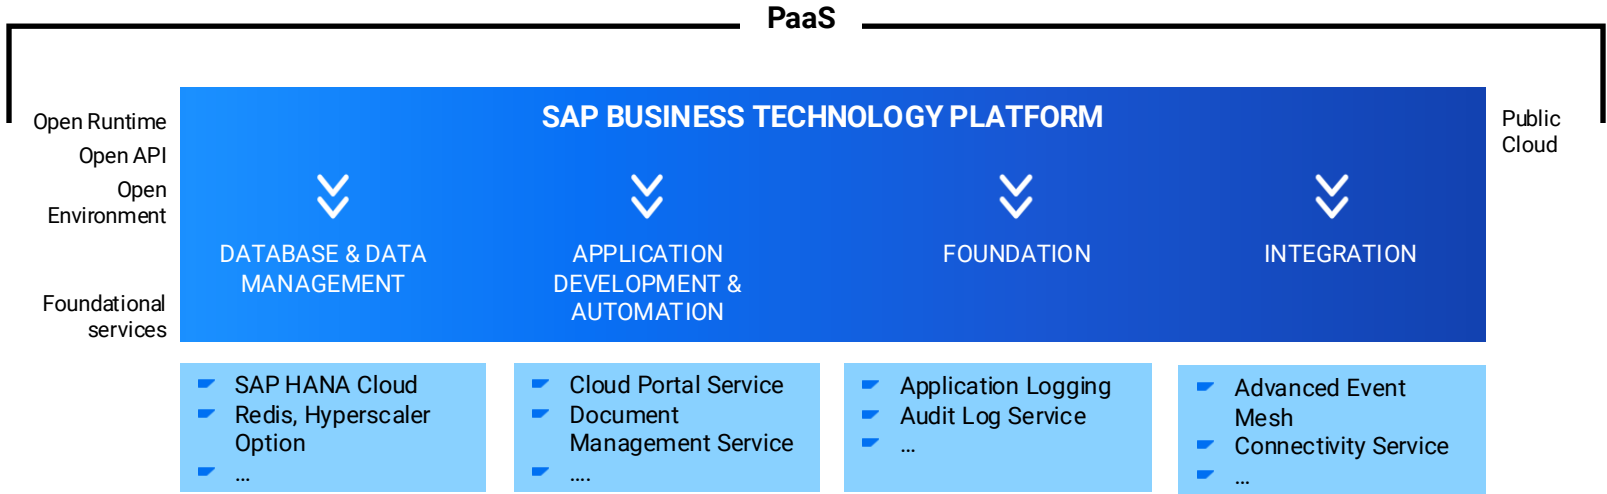

Terms	Definition
Change Management	Process of creation, evaluation, implementation, and tracking of changes for the purposes of enhancing security and avoiding risks associated with such changes, like data loss and compromises.
Infrastructure Qualification	The process of demonstrating the ability to fulfill SAP-specified requirements of IT infrastructure components.
Quality Management System (QMS)	A Quality Management System is SAP's policies, standards, systems, and processes relative to achieving quality objectives to protect Customer Data. Such protections include the controls, methods, skills, and other quality management system elements used to design and execute consistent and reliable information results.
Quality Management System Documents	General available information from SAP describing SAP's Quality Management System, plus additional technical and organizational measures described later. The Quality Management System Documents do not instruct customers on obtaining GxP compliance.
Service Qualification	Processes involving risk assessments, testing, and documenting the services running on the underlying platform to verify the qualified state. This can be performed as continuous assurance of the qualified state through risk-based service qualification runs.

SAP Digital Manufacturing is a SaaS solution on SAP Business Technology Platform

SAP Digital

Platform

Hyperscalers

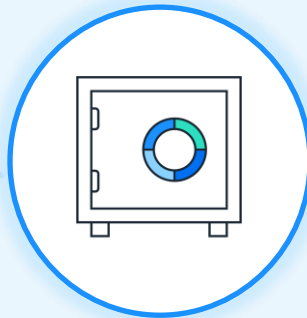

Compliance and validation complexity can hinder our customers in faster adoption of SAP Digital Manufacturing in Regulated industries.

Customers see three common challenges:

Cloud Operations

- How is SAP Digital Manufacturing operated as a cloud (SaaS) product?

Cloud Service Qualification

- What is needed in SAP Digital Manufacturing to enable GxP-compliant processes?

SAP Processes

- How does SAP develop, document, and ensure the quality of SAP BTP and SAP Digital Manufacturing?

Quality Management Information provided by SAP Quality Requirement Schedule (1/3)

Area	Description	References
GxP Quality Guidelines	SAP's description of how quality is assured for the cloud services. It covers product specific quality policy and approach as well as its organization and implementation.	ISO 9001; Quality Management System for Development of Business Solutions, or its equivalent
Infrastructure Qualification	SAP Digital Manufacturing is developed for integration with SAP BTP.	Certifications & Attestations available in SAP Trust Center
Infrastructure Installation Qualification	This document serves as a preliminary step for the documentation of infrastructure installation qualification during the establishment of new instances for our customers. While this document encompasses essential information typically found in an infrastructure installation qualification document, the current document is intended solely as a precursor, aiming to gather inputs for the infrastructure installation qualification documentation.	Infrastructure Installation Qualification Precursor Documentation
Scope and Build of SAP Release	For each release, SAP will provide: 1) Details of the features present in the release 2) Confirmation on the Testing/Qualification of the features in the solution 3) Communication: • Timelines for Release • Required downtime (planned unavailability time) • Specific activities Customer needs to wrap up prior to the release date	Release Document (What's New Viewer & SAP Notes) Traceability in JIRA SAP Digital Manufacturing Roadmap Explorer Release Schedule and Dates Service Catalog

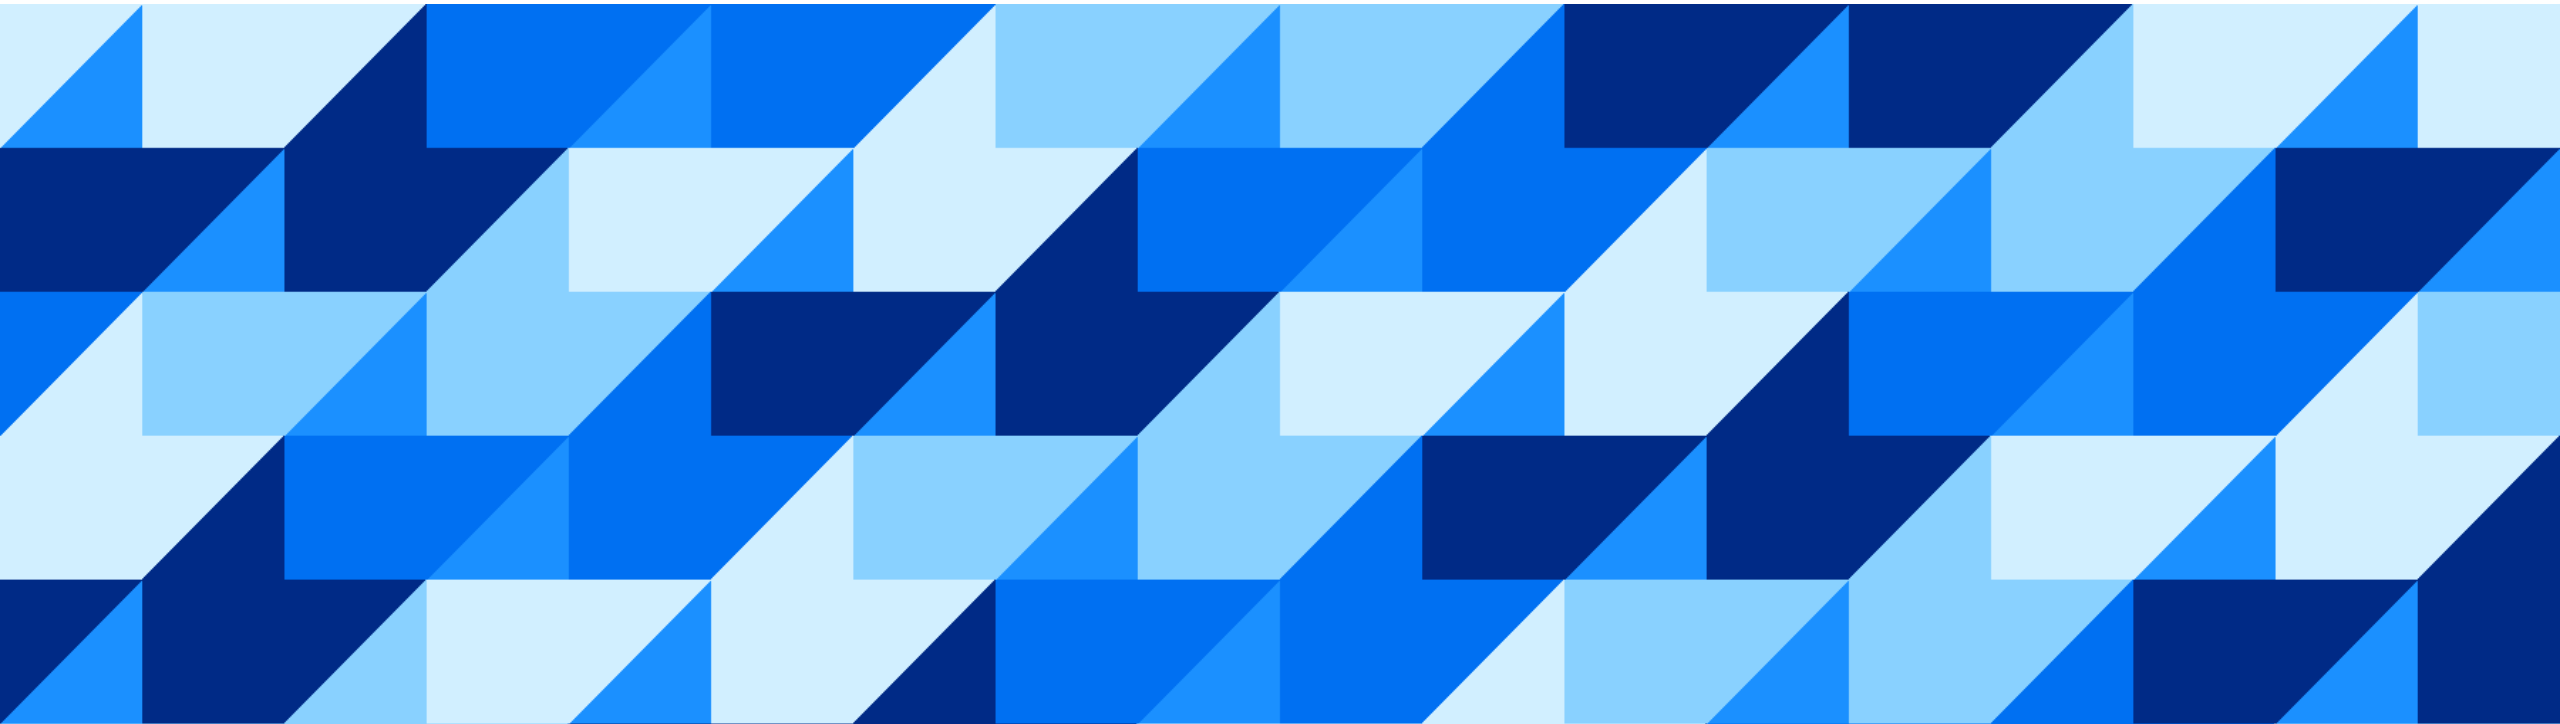

Quality Management Information provided by SAP Quality Requirement Schedule (2/3)

Area	Description	References
Bug Fix in SAP Release	SAP will follow Incident Management and Change Management process to fix and resolve bugs.	Incident Management Change Management Support Schedule for Cloud Services/Contractual Agreements
Promote to Quality/Promote to Production of Bug Fix in SAP Release	For each release, SAP will provide: 1) Details of the features present in the release 2) Confirmation on the Testing/Qualification of the new features in the solution 3) Communication: • Timelines for Release • Required downtime (unavailability time) • Specific activities the customers needs to wrap up prior to the date	Release Document Traceability in JIRA SAP Digital Manufacturing Roadmap Explorer Release Schedule and Dates Service Catalog
Security of Customer Data	Data Protection & Privacy, encryption of Personal Data, User Access Management	See Data Processing Agreement User Access Agreement for infrastructure (database, development platform) according to applicable reports
Access and Availability of Customer Data	Customer will always have access to Customer Data in accordance with the terms and conditions of the Agreement throughout the subscription term.	Agreement - specifically, the "General Terms and Conditions" document, access and availability of customer data
Platform access management for change control	This includes SAP's user access management controls and measures.	User Access Management Memo

Quality Management Information provided by SAP Quality Requirement Schedule (3/3)

Area	Description	References
Backup and Restore	The policy covers SAP's Backup and Restore requirements applicable to the Cloud Services.	Backup & Restore
Business Continuity Management and Resiliency	The policy covers SAP's Business Continuity and Management process requirements applicable to the Cloud Services.	Business Continuity Management & Resiliency
Change Management	SAP will provide software development and operations lifecycle management documents related to the qualification of changes while following SAP Change Management Process.	Change Management
Qualification of SAP Default functionality of the Cloud Service	Audit trails, electronic records descriptions, electronic signature process, (though not restricted to these alone) including changes.	Continuous Qualification Reports for Cloud Services SAP Digital Manufacturing Functional Testing
Maintain Data Center Locations	SAP will provide necessary information of the Data Center locations – primary and secondary Data Center. Data Center: SAP Digital Manufacturing: EU-20, US-20	Certifications & Attestations available in SAP Trust Center
Regulatory Traceability	Regulatory Requirements Traceability Matrix (RRTM) - This matrix contains a list of specific requirements traced to how Digital Manufacturing operationally, technically as well as functionally operate.	Regulatory Requirements Traceability Matrix

Frequently Asked Questions

Frequently Asked Questions (1/2)

1

What does SAP Digital Manufacturing offer regarding GxP offerings/Validation Services?

SAP Digital Manufacturing doesn't provide validation services. However, SAP Digital Manufacturing offers SAP Quality Requirement Schedule. SAP Enterprise Support customers also get access to SAP Tricentis Test Automation for automating validation tests. SAP Digital Manufacturing collaborates with partners on validation services.

2

Is SAP Digital Manufacturing a Validated Software?

No - Validation involves testing software for its intended use, which can only be performed by customers as the business process owners. SAP Digital Manufacturing is a qualified product, meaning it is tested for functionalities and features per release using a controlled Secure SDL process.

3

Is SAP Digital Manufacturing 21 CFR Part 11 Compliant?

No - Compliance requires certifications, however, there is no GxP certifying authority for cloud vendors. Instead, SAP Digital Manufacturing is a "GxP capable" solution, meaning it supports compliance but is not certified.

4

What do customers get with an SAP Quality Requirement Schedule?

The SAP Quality Requirement Schedule provides customers the right to audit the quality management system and change management documentation within the mutually agreed scope.

Frequently Asked Questions (2/2)

5

Provide details of your most recent certification audit by your certification body – If applicable.

Details of our certifications and attestations are available on the [SAP Trust Center](#).

6

What are the Audit Log retention policies?

The standard SAP Digital Manufacturing License includes a basic version of the BTP Audit Log Viewer, which retains logs for 90 days. To extend the retention period, customers can purchase the Premium Edition, which offers longer storage durations. Details about the Premium Edition and its retention policies can be found on [SAP Help Portal](#). Additionally, information on the objects included in the audit log is available [here](#).

7

Does SAP Digital Manufacturing use sub-contractors and if so, in what capacity? How is the use of subcontract resources controlled?

Yes, SAP Digital Manufacturing uses third parties during its product lifecycle. A list of relevant third parties is maintained in the sub-processor list available on [My Trust Center](#). The use of subcontractors is controlled through a standardized Supplier Management Process, which includes third-party risk management. This process is governed by Supplier Lifecycle Management (SLM) Controls, documented in the BTP SOC2 report. The SOC2 report can be requested via the [SAP Trust Center](#).

8

What procedures and policies are implemented for release management, and what documentation is provided to customers prior to a release ?

SAP Digital Manufacturing follows a well-defined quarterly release management process, delivering new features each quarter. Before each release, SAP provides: 1. Requirement Precursors for APPs, PODs, Plugins, and APIs in the Service Catalog; 2. Feature Details in the release via "What's New Viewer" in the Help Portal; 3. Release Communication on release timelines and planned downtime (if any) in the [Help Portal](#).
