For all recent and planned innovations, potential data protection and privacy features include simplified deletion of personal data, reporting of personal data to an identified data subject, restricted access to personal data, masking of personal data, read access logging to special categories of personal data, change logging of personal data, and consent management mechanism.

Regulatory compliance overview

GxP definition

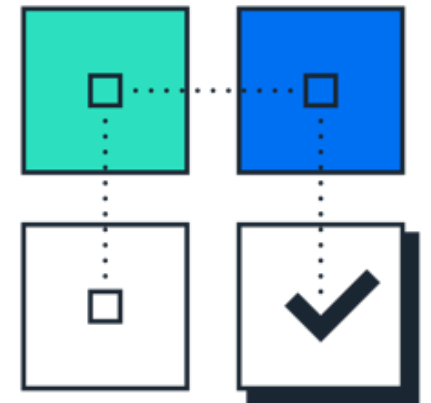

GxP is a set of regulations and quality guidelines formulated to ensure the safety of life sciences products while maintaining the quality of processes throughout every stage of manufacturing, control, storage, and distribution. The GxP standards were established by the Food and Drug Administration for a range of compliance related activities and are recognized as:

G = Good
x = Variable
P = Practices

The variable “x” depends on the application of the standards. The value of x can be M for “Manufacturing,” C for “Clinical,” L for “Laboratory,” S for “Storage,” D for “Distribution,” R for “Review,” and so on. The purpose of the guidelines is to help ensure that the regulated organizations comply with the standard processes of various functions. [GxPs](#) are mostly similar across all the countries.

The guidelines mainly focus on the following areas:

- Traceability – Helping ensure that the development history of the product can be reverse engineered (requirements to design elements to code to testing to reporting in user documentation)
- Accountability – Identifying the contribution of every individual involved in the development process (training of the employees)
- Data integrity – Helping ensure the reliability of data (data security)

SAP Quality Requirements Schedule: Definition

An additional, optional service that provides the customer:

Confidential quality management information to help the customer implement and validate SAP Batch Release Hub for Life Sciences:

- Technical and organizational measures and controls
- Development and operation of SAP Batch Release Hub for Life Sciences in a qualified state
- Help from SAP in ensuring the confidentiality, integrity, and availability of the customer's data
- Support for life sciences customers in their GxP compliance requirements

The right to audit the quality management system and change management documentation within the mutually agreed scope

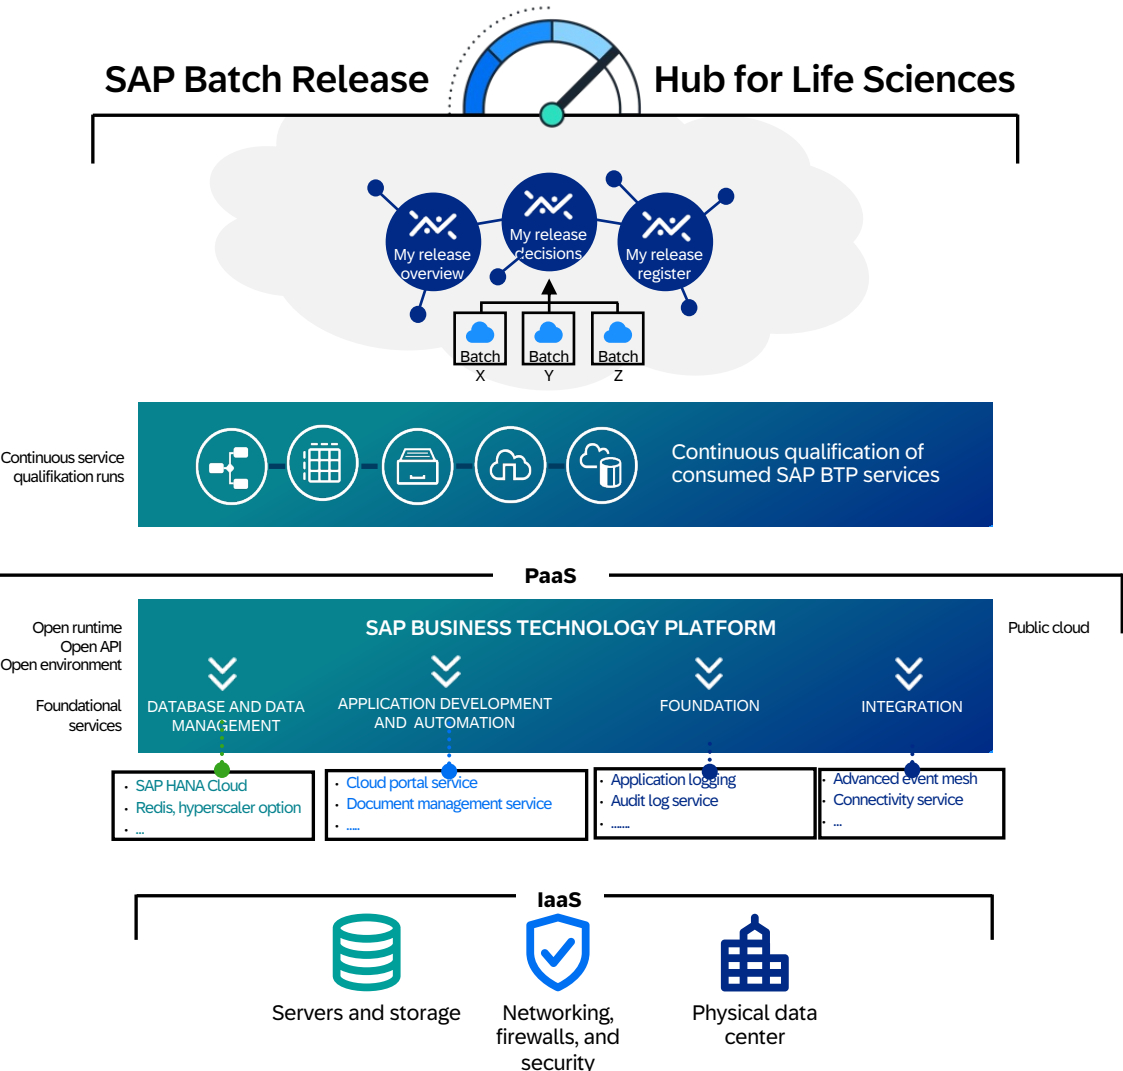

Definitions

Terms	Definition
Change management	The process of creating, evaluating, implementing, and tracking changes for the purposes of enhancing security and avoiding risks associated with these changes, such as data loss and compromises
Infrastructure qualification	The process of demonstrating the ability to fulfill SAP-specified requirements of IT components
Installation qualification	A part of the software development and operations lifecycle that involves the process of validating the professionally delivered, installed, and configured code for software hosting the cloud services
Quality management system or QMS	A quality management system consisting of SAP's policies, standards, systems, and processes to protect customer data. Such protections include the controls, methods, skills, and other QMS elements used to design and execute consistent and reliable information results.
Quality management system documents	Generally available information from SAP describing SAP's QMS, plus additional technical and organizational measures described later. The QMS documents do not instruct the customer on obtaining GxP compliance.
(Continuous) service qualification	Risk assessment, test case, and reporting of the services running on the underlying platform to maintain the qualified state This can be performed as continuous assurance of the qualified state through risk-based service qualification runs.
Traceability matrix and test report	The process of tracing, identifying, and verifying a specific functionality or component being developed to test

SAP Batch Release Hub for Life Sciences is a multitenant SaaS solution on SAP Business Technology Platform

SAP Batch Release
Hub for Life
Sciences

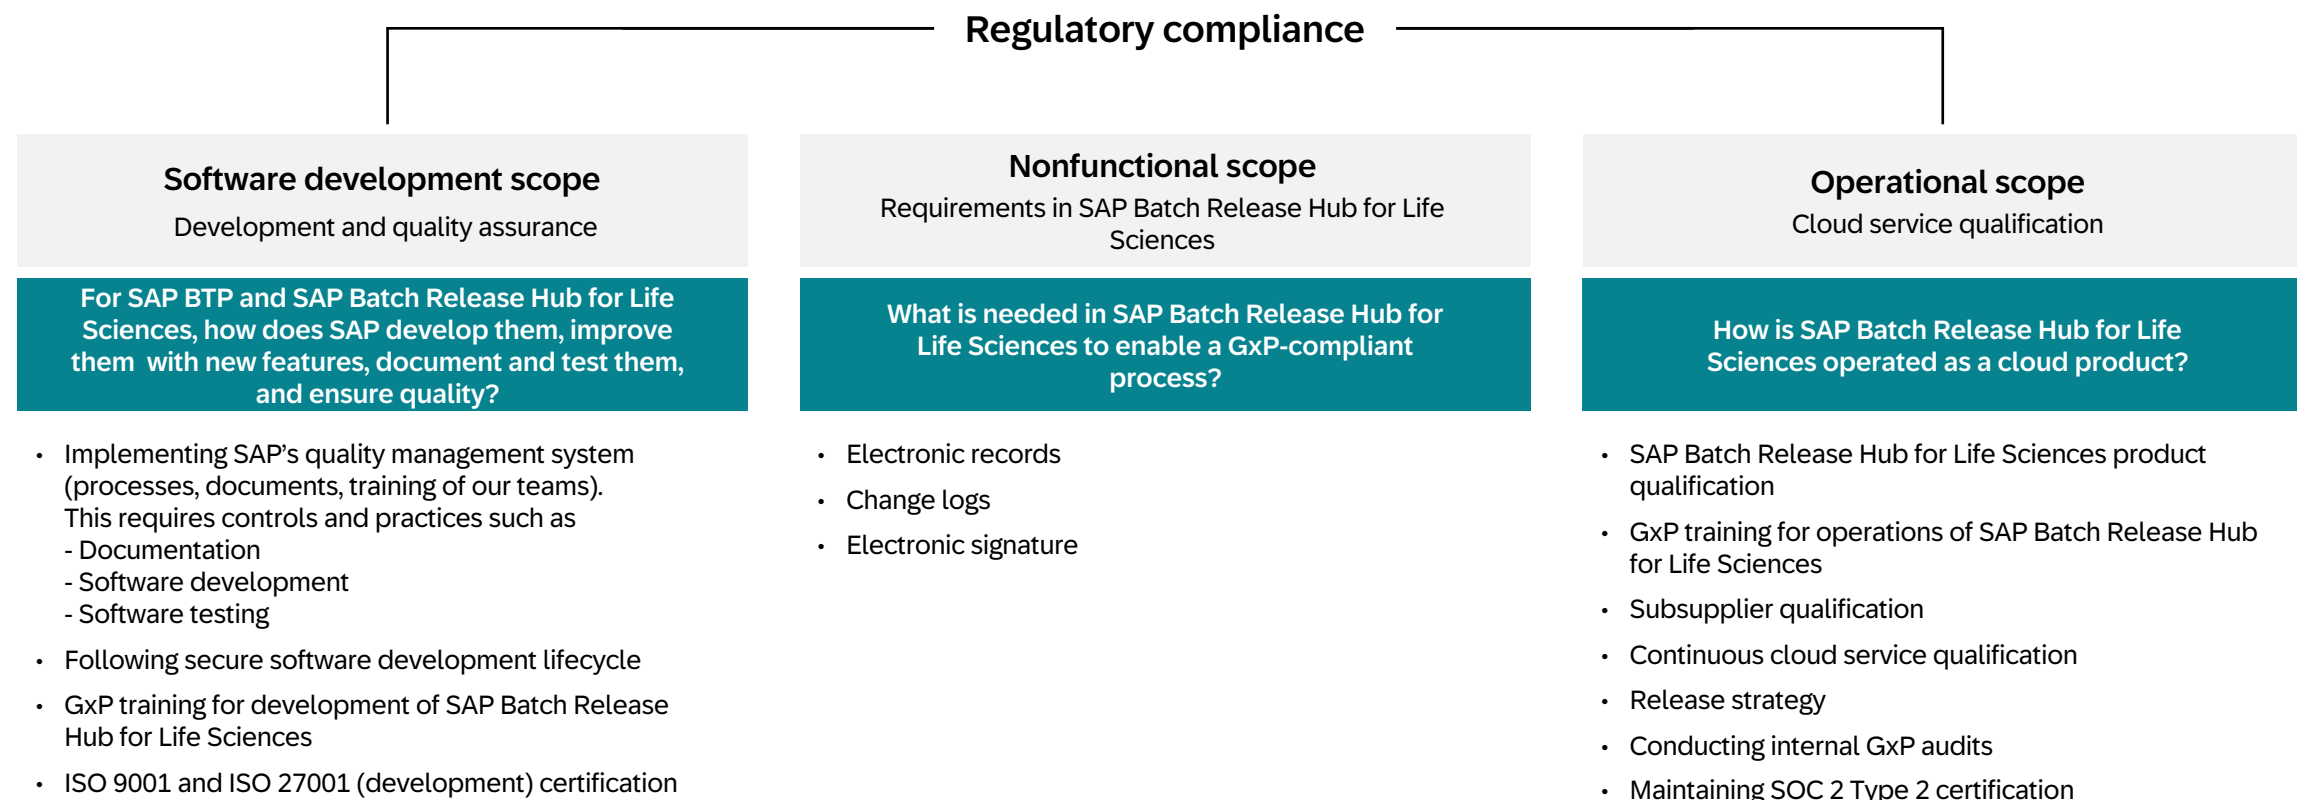

Shared responsibility model (SaaS solution)

Shared responsibility model	Customer	Validation	Validation of configured solution User endpoint solution management Application identity, access, and account management Customer data Supplier management
	SAP Batch Release Hub for Life Sciences	SaaS certification and attestation processes (GxP qualification scope)	Business continuity management User access management Extension controls: Subsupplier management, backup, and restore Continuous service qualification (CSQ) Installation/operational qualification (IQ/OQ) Change and configuration management
	SAP BTP	PaaS certification and attestation processes	Platform and service operations Change and configuration management Hosting customer data (database service) Identity and access management for platform and services Operating system, network, and firewall configuration Business continuity management and backup/restore Subsupplier management
	AWS	IaaS	Data centers, networking, compute storage, physical security

Key notes:

- Validation of on-premise solution is owned and managed by customer
- Supported by existing SAP certifications, such as:
 - Quality management system (ISO 9001)
 - IT security management system (ISO 27001)
 - Business continuity management system (ISO 22301)
 - SOC 1 and SOC 2 requirements

GxP compliance approach for SAP Batch Release Hub for Life Sciences

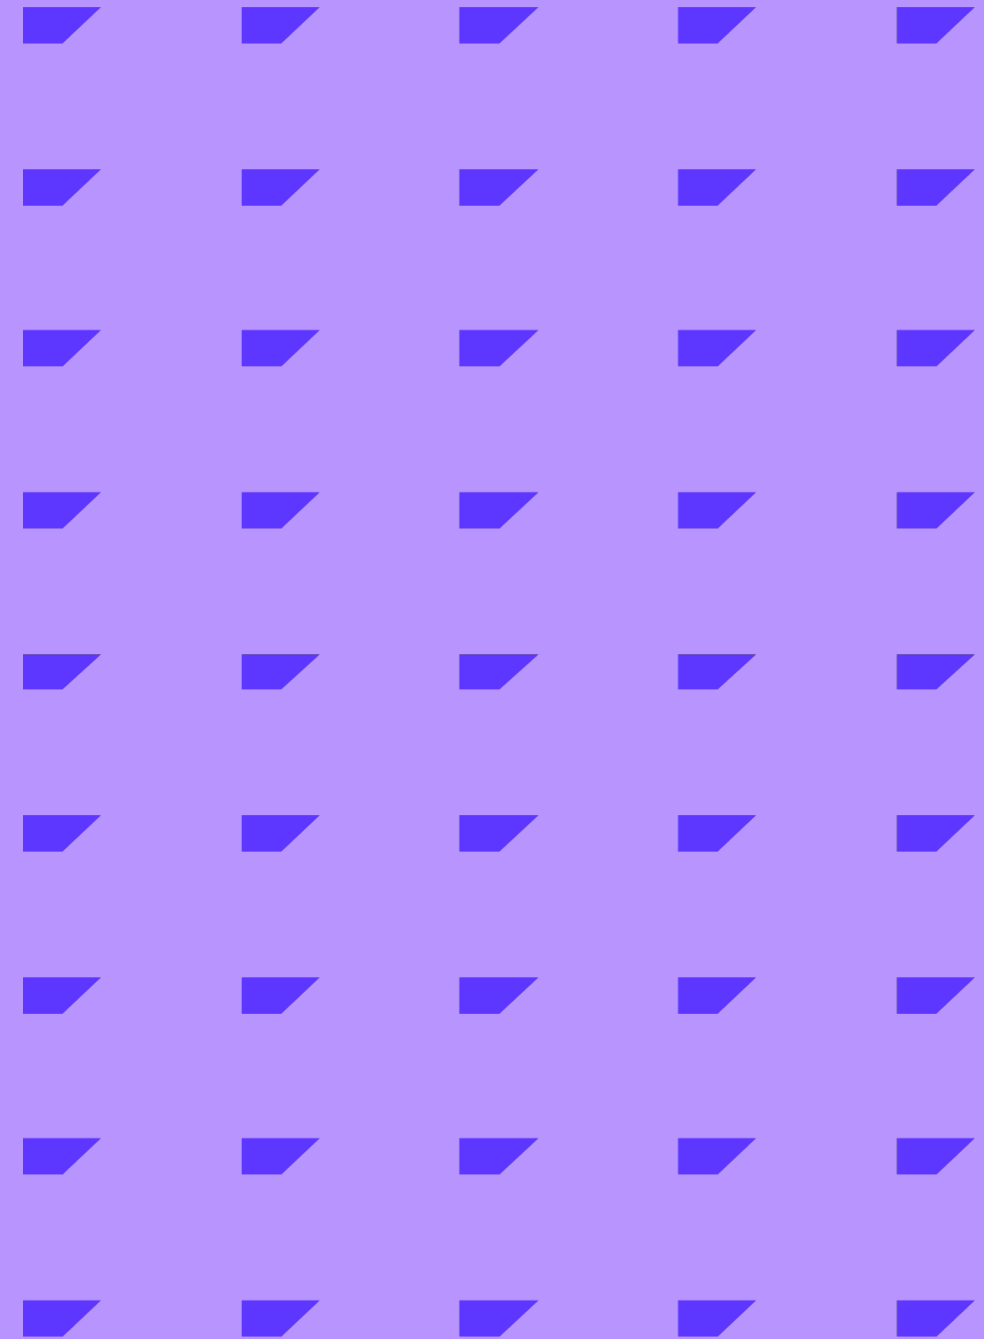

Quality management information provided by SAP Quality Requirements Schedule (1/2)

Area	Description	References
GxP quality guidelines	SAP's description of how quality is assured for the cloud services. It covers product-specific quality policy and approach as well as its organization and implementation.	ISO 9001, quality management system for development of business solutions, or its equivalent
Infrastructure qualification		Certifications and attestations available in SAP Trust Center
Installation qualification	The code deployment process includes builds developed and deployed per SAP's change management memo.	Installation qualification protocol Change management memo
Scope and build of SAP release	For each release, SAP will provide: • Details of the features present in the release • Confirmation on the testing and qualification of the features in the solution • Communication: • Timelines for release • Required downtime (planned unavailability time) • Specific activities customer needs to wrap up prior to the release date	Release document Traceability matrix and test report
Bug fix in SAP release	SAP will follow incident management and change management process to fix and resolve bugs.	Incident management Change management

Quality management information provided by SAP Quality Requirements Schedule (2/2)

Area	Description	References
Promotion to quality or promotion to production of bug fix in SAP release	For each release, SAP will provide: • Details of the features present in the release • Confirmation on the testing and qualification of the new features in the solution • Communication: • Timelines for release • Required downtime (unavailability time) • Specific activities the client needs to wrap up prior to the date	Change management memo Release document Traceability matrix
Security of customer data	This includes data protection and privacy, encryption of personal data, and user access management.	See DPA User access management for infrastructure (database, development platform) according to applicable reports
Access and availability of customer data	Customer will always have access to customer data in accordance with the terms and conditions of the agreement throughout the subscription term.	Agreement – specifically, the “General Terms and Conditions” document, access, and availability of customer data
Platform access management for change control	This includes SAP’s user access management controls and measures.	User access management memo
Backup and restore	The policy covers SAP’s backup and restore requirements applicable to the cloud services.	Backup and restore
Business continuity management and resiliency	This policy covers SAP’s business continuity and management process requirements applicable to the cloud services.	Business continuity management and resiliency
Change management	SAP will provide software development and operations lifecycle management documents related to the qualification of changes while following SAP’s change management process.	Change management memo
Qualification of SAP default functionality of the cloud services	This comprises audit trails, electronic records descriptions, and electronic signature process (though not restricted to these alone), including changes.	Traceability matrix and test report
Maintenance of data center locations	SAP will provide necessary information of the data center locations – primary and secondary data center.	Certifications and attestations

Frequently asked questions

Frequently asked questions (1/2)

1 Is an SAP Quality Requirements Schedule service available for all SAP applications delivered through SAP BTP?
No – only for specific applications; contact your SAP representative for further details.

2 Are the SAP applications for which there is an SAP Quality Requirements Schedule delivered by SAP as GxP validated?
No – validation is a responsibility of the customer, not SAP. The intention of the services provided through SAP Quality Requirements Schedule is to support the customer's efforts to comply with GxP.

3 Does an SAP Quality Requirements Schedule also apply to SAP HANA Enterprise Cloud?
No – an SAP Quality Requirements Schedule applies only to SAP applications delivered through SAP BTP (public cloud). SAP HANA Enterprise Cloud is not based on a public cloud infrastructure and thus does not have the same controls as SAP BTP.

4 SAP is an ISO-certified company, but is it also GxP certified?
No – there is no GxP certifying authority for cloud vendors.

Frequently asked questions (2/2)

5 Will an SAP Quality Requirements Schedule become available for all SAP applications delivered through SAP BTP?
Please check the road map for the specific product or contact your SAP representative.

6 If an SAP application has an SAP Quality Requirements Schedule, does this mean that it is also SOC 1 and SOC 2 certified?
SAP Quality Requirements Schedule is not a certification but an additional quality service offering. The certifications available for each application can be found in SAP Trust Center.

7 What do customers get with an SAP Quality Requirements Schedule?
Customers subscribe to services that supply them with additional quality management information and the right to audit.

8 Why do companies in the life sciences industry need an SAP Quality Requirements Schedule?
With the standard contract, all the information customers can get is specified in the “General Terms and Conditions” document. That is usually not sufficient to enable customers to comply with GxP guidelines. An SAP Quality Requirements Schedule addresses this need.
